

Software Requirements Specification

Delivery Application

1. Introduction

1.1 Purpose

The purpose of the Delivery App is to provide an efficient platform for delivery personnel associated with the Food App to manage and streamline the delivery process. This document outlines the functional and non-functional requirements of the delivery application, ensuring timely and accurate food deliveries.

1.2 Scope

The Delivery App will serve as a mobile application for Android and iOS platforms, enabling delivery personnel to receive orders, track delivery locations, update order statuses, and communicate with customers and admin staff. It ensures transparency and real-time updates within the delivery lifecycle.

1.3 Intended Audience

- **Business Stakeholders:** To understand project requirements.
- **Delivery Personnel:** For daily operations and efficient delivery management.
- **Developers:** For system design and implementation.
- **Project Managers:** To track the development progress.

1.4 Definitions, Acronyms, and Abbreviations

- **API:** Application Programming Interface
- **UI/UX:** User Interface/User Experience
- **ETA:** Estimated Time of Arrival

1.5 Overview

This document provides a detailed description of the Delivery App's functionalities, system design, and constraints, ensuring seamless delivery operations for Food App orders.

2. Overall Description

2.1 Product Perspective

The Delivery App is a dedicated module integrated with the Food App's backend system. It allows delivery personnel to interact with the order management system for real-time delivery updates and communication.

2.2 Product Features

- **Login and Profile Management**
 - OTP-based login for delivery personnel.
 - Profile management with personal details and delivery history.
- **Order Management**
 - View assigned orders with details (order number, customer details, and items).
 - Update order status (e.g., Picked Up, Out for Delivery, Delivered).
- **Delivery Tracking**
 - Real-time navigation with GPS integration.
 - Display customer location and optimized delivery route.
- **Communication Tools**
 - Contact customer for delivery queries.
 - Notify admin for issues (e.g., delayed delivery).
- **Performance Tracking**
 - View delivery history and performance metrics.
 - Track incentives or rewards based on delivery completion.

2.3 User Classes and Characteristics

- **Delivery Personnel:** Users responsible for delivering orders efficiently.
- **Admin Staff:** Backend operators monitoring delivery status and managing escalations.

2.4 Operating Environment

- **Mobile Platforms:** Android and iOS.
- **Backend:** Cloud-based server integrated with the Food App.

2.5 Constraints

- Must operate reliably in areas with low network connectivity.
- Should minimize battery usage during navigation.

2.6 Assumptions and Dependencies

- Delivery personnel have a smartphone with GPS functionality.
- Stable integration with the Food App's backend system.
- Real-time data synchronization for order and status updates.

3. Admin Additions regarding delivery

Admin Dashboard

- Overview of delivery operations with real-time updates.
- Quick access to recent activities and key metrics.

2. User Management

- Manage profiles of delivery personnel, including permissions and role assignments.
- Enable or disable user accounts as needed.

3. Delivery Tracking

- Monitor the live location of delivery personnel.
- Visual representation of delivery routes on a map.

4. Communication Tools

- Send mass messages or targeted notifications to delivery personnel.
- Handle customer inquiries and complaints efficiently.

5. Performance Analysis

- View performance metrics such as delivery times, completion rates, and customer feedback scores.
- Generate detailed reports on delivery efficiency.

6. Notifications & Alerts

- Set up alerts for unusual delivery times or delayed orders.

- Manage and resolve critical delivery issues directly from the admin panel.

7. Incentives and Rewards Management

- Track delivery personnel incentives and rewards based on performance.

User Flow for Delivery Personnel App

1. Start

- Delivery personnel launch the app.

2. Login and Authentication

- Enter mobile number.
- Receive OTP.
- Input OTP for verification.
- Successfully log in.

3. Profile Setup or Update

- Navigate to the profile section.
- Set up personal details (e.g., name, vehicle information).
- Edit details if required.

4. View Assigned Orders

- Check the list of assigned orders on the dashboard.
- Click an order to view full details (customer name, address, order contents).

5. Navigation and Delivery

- Use in-app GPS to navigate to the pickup location.
- Mark order as 'Picked'.
- Navigate to the delivery location using GPS.

6. Order Status Update

- Upon reaching the delivery location, mark the order as 'Delivered'.
- Notify admin if issues arise (e.g., customer unavailability).

7. Communication

- Call or message the customer for any clarifications.
- Notify admin for escalations or issues.

8. Notifications

- Receive notifications for:
 - New order assignments.
 - Updates from admin or customers.

9. Performance Metrics

- Access performance dashboard to view:
 - Delivery history.
 - Completion statistics.
 - Earnings and incentives.

10. Logout or Continue

- Log out if the shift ends or continue to handle new orders.

11. End

- Exit the app.
